

## Google unveils AI chips

- Google announced two new products to help clients to deploy intelligent connected devices at scale, at the Google Cloud Next '18 conference in San Francisco.
- First one is Edge TPU, a new hardware chip (ASIC) to run high accuracy Artificial Intelligence tasks
- Extremely low cost, small foot print and high reliability.
- It is expected to bring brain in any device
- Next one is "Cloud IoT edge ", a software stack that extends Google Cloud's powerful AI capability to gate ways and connected devices
- LG CNS uses these technologies for AI based vision inspection and Google in its data centres.
